

IN THE SPECIFICATION

Please replace the paragraph beginning on page 1, line 7, after the subtitle “Background Art”, with the following new paragraph:

---An existent device to deliver a powdery medicine into a nasal cavity of a patient suffering from asthma or nasal allergy (refer, for example, to JP-A No. ~~46-49094~~ 46-4094) is adapted for detaching a cap-type nozzle fitted detachably to the top end of a cylindrical member formed with an air discharge port of a pump that discharges air by squeezing a rubber ball with a hand, attaching a capsule filled with a powdery medicine to the inside of the cylindrical member, fitting the nozzle again to the top end of the cylindrical member, then pressing the pump formed as the rubber ball so as to squeeze in the direction of the nozzle, protruding the pointed top end of a needle contained in the pump passing through the capsule loaded in the cylindrical member from the air discharge port of the pump to a position reaching the nozzle, thereby making holes on both ends of the capsule and supplying air driven out of the air discharge port of the pump flowing through the inside of the capsule to the nozzle and spraying the powdery medicine in the capsule from the nozzle.---
